Geometric Field Theory 2026

2nd International Workshop

Geometric Field Theory

July 6-8, 2026 Warsaw, Poland

Certificate of participation

This is to certify that **Marco D. Maceda**, from Autonomous University of Madrid (UAM) in Spain, delivered a 30 minute short talk at the second edition of the Geometric Field Theory international workshop series on Tuesday, July 7, 2026 at the University of Warsaw in Poland. The talk, entitled

Manifolds with boundaries, field theory and multisymplectic formalism,

sparked a vibrant discussion afterwards.

The Geometric Field Theory is a biannual gathering that seeks to provide an opportunity for researchers working on the geometric description of field theories to share recent results, as well as to foster cross-pollination with allied topics. The inaugural edition took place at El Escorial, near Madrid, in Spain. This second edition focused on the interplay between geometry and theoretical physics. More details can be consulted at the official webpage

https://www.fuw.edu.pl/KMMF/GFT2026.

We thank Marco D. Maceda for his interesting talk.

Sincerely,

Jordi Gaset Rifà

Lead Organizer of the GFT series
Tenure-track Assistant Professor
CUNEF Universidad
